

Final Business Insights Report

1. Executive Summary

Our interactive Power BI dashboard provides a comprehensive review of global sales, profitability, and customer behaviour. Across the analysed timeframe, the business generated 9M in total sales and 1.08 in total profit, spanning over 25,000 unique orders with an average discount rate of 14%.

2. Key Insights & Observations

- **Profitability vs. Volume:** While our total sales reached 9M, our net profit margin sits at roughly 12% (1.08). This indicates healthy baseline returns, but the 14% average discount rate should be monitored closely to ensure it isn't cannibalizing our margins in lower-performing categories.
- **Geographic Drivers:** Based on the Sales by Region and Sales by Market breakdowns, consumer demand is highly concentrated. APAC & EU emerge as our primary revenue engines, whereas *Canada* represents a clear expansion or optimization opportunity.
- **Seasonality and Trends:** The Monthly Sales Trend reveals clear cyclical patterns. Revenue consistently peaks during November and December, likely driven by holiday or end-of-year purchasing cycles. Conversely, February shows a notable dip where targeted marketing campaigns might be needed to stabilize cash flow.
- **Product and Segment Performance:** Product performance is highly Pareto-driven, where our Top 10 Products and Top 10 Customers contribute a disproportionate share of our overall revenue. Furthermore, the Segment Analysis indicates that the Consumer segment dominates our client base.
